

SAPIENZA
UNIVERSITÀ DI ROMA

Rome, 13 May 2026

Dear Colleagues,

Leonardo Sandri is completing the Master's degree in Artificial Intelligence and Robotics at the Department of Computer, Control and Management Engineering, Sapienza University of Rome, where he attended my course "Seminars in Artificial Intelligence" during the last academic year.

During the course, he actively participated in the challenge activity proposed within the seminar, and his work stood out for being the only successful attempt at identifying the hidden trigger embedded in the attacked version of the Minerva model used during the exercise.

Please do not hesitate to contact me should you need additional information.

Best regards,

Prof. Daniele Nardi
